

GEZE UK RIBA APPROVED CPD SEMINARS

Continuing professional development for architects

GEZE recognises the importance of CPD and offers a range of seminars specifically designed to assist architects to meet the RIBA requirements of the annual CPD target of 35 hours.

GEZE's presentations have been produced in-house using Microsoft Powerpoint allowing us the flexibility of a PC display, or projected to wide screen for large groups. We have not included (nor are allowed to include) any specific product information in the presentation, but have a full product catalogue available if required.

EN 16005 – New European Safety Standard for Power Operated Doorsets

Coming into effect from April 2013 the new European safety standard EN 16005 is the first formalised cross European standard for automatic doors. Recognised as a more onerous standard it relates to the potential hazards and hazardous situations relevant to power operated doorsets.

This new seminar explains the standard, its implications for architects and how to comply. GEZE is the first company in the UK to offer a RIBA approved CPD on the new standard.

Designing Effective Heat and Smoke Ventilation

Adequate fire and smoke ventilation in residential and commercial properties can save lives. This seminar gives an overview of the requirements for the selection and specification of fire and smoke venting equipment.

Glass Door Assemblies Selection and Specification

Providing an overview of the properties of glass this seminar looks at how glass can be used in door situations throughout a building as well as the standards and legislation that apply.

Removing Barriers to Access

Since the introduction of the Disability Discrimination Act and the Equality Act ensuring access is available to all is a priority. This seminar provides guidance in the use and specification of door control devices in a way that does not make doors into obstacles.
